PROFESSIONAL SUMMARY

Full Stack Engineer with 3 years of experience with delivering secure applications across microservices and distributed systems, from design to production support. Proven record of enforcing coding standards and enterprise-scale deliveries. Adept at modernizing legacy applications and undertaking migration initiatives in alignment with enterprise standards and reliable modernization practices. Passionate about advancing into large-scale, real-time applications while building deep expertise in AI/ML integration and Big Data.

TECHNICAL SKILLS

Languages & Frameworks: Java, Spring, React, Angular, JavaScript, TypeScript, SQL, NoSQL

Cloud & DevOps: AWS, GCP, OpenShift, Docker, Kubernetes, Terraform, CI/CD - Tekton, GitHub.

Tools & Technologies: Kafka, Rabbit MQ, Redis, Splunk, Dynatrace, Jira, Maven, Gradle, JFrog.

Databases: PostgreSQL, MS SQL Server, Oracle, MySQL, MongoDB, BigQuery.

API & Security: RESTful APIs, SOAP APIs, GraphQL, Apigee, Swagger/OpenAPI, JMeter, 42Crunch, JWT, OAuth 2.0.

AI/ML: Spring AI, RAG, Vector Databases, Gemini, LangChain, Claude, Copilot.

PROFESSIONAL EXPERIENCE

Junior Engineer - Ford GTBC, FSCD-IT (JULY 2023 – Present)

Parts Control Application | *New Application, React, Redux, TypeScript, Spring, IBM DB2, BigQuery, GCP, Entra ID, Tekton (B2B)*

- Maintaining ETL jobs ingesting multi-format files from enterprise platforms into GCS, producing mainframe-readable files of 10K+ records.
- Leveraged GCS for I/O files management and optimized SFTP transfers with email alerts, surpassing mainframe capabilities.
- Rapidly deploying workloads on GCP Cloud Run with Cloud Scheduler for daily batch processing, configured via Terraform.
- Resolved Ecoboost Tekton PAC pipeline failures and currently migrating it to GitHub Actions, improving CI/CD reliability and scalability.

Global Brand Protection System | *Rewrite Project, React, TypeScript, Tailwind, Spring, Postgres, GCP, ADFS, Redis, Tekton (B2C)*

- Rewrote legacy UI with reusable React components, custom hooks, and wrapper classes, reducing UI development effort across teams.
- Implemented DB-driven dynamic dropdowns and paginated tables with input validation, improving data load efficiency for large data.
- Enforced PII/SPII data governance using AES-GCM encryption and secure data handling, maintaining enterprise security standards.
- Built APIs and batch jobs using DDD, SOLID, Redis caching, and optimized queries, improving response time for data-heavy operations.
- Adopted TDD with GitHub Copilot, JUnit, and Mockito, increasing test coverage and validating complex business logic and edge cases.
- Remediated 50+ vulnerabilities flagged by 42Crunch, SonarQube, Fossa, and Cyscode to meet enterprise security standards.

Global Catalogue Application | *Enhancement Project, Angular, PrimeNG, SCSS, Spring, PostgreSQL, GCP, Entra ID, Pub/Sub, Redis, GitHub Actions (B2B)*

- Built Angular components including dynamic tables, tree views, and pop-ups, delivering intuitive UI and seamless user interactions.
- Built reusable shared modules encapsulating complex business-critical logic, extending capabilities beyond the legacy application.
- Delivered REST APIs with ACID-compliant services using Spring Data, MVC, and Security, ensuring consistency across CRUD operations.
- Built event-driven APIs with MQ integration, ensuring reliable message persistence and decoupling services for independent scalability.
- Implemented Redis-backed JWT caching for Entra ID OIDC, cutting auth latency 50% with token expiry and revocation enforcement.
- Enabled pre-authorized service-to-service communication via Spring Cloud across 10 distributed microservices, reducing auth overhead.
- Resolved Apigee file transfer limitation by architecting a GCS bucket solution with signed URLs, enabling secure access for large files.

GSPPS - Logistics Application | *Legacy App, Java, Struts, WAS Liberty, Spring, IBM DB2, MS SQL Server, Red Hat OpenShift, ADFS, Tekton (External)*

- Migrated WAS Liberty app from PCF to RedHat Quay & OpenShift, moving S3 & SMB data to PVC and Nexus & local jars to JFrog Artifactory.
- Shifted build system from Ant to Gradle and enabled Ecoboost Tekton PAC pipeline, reducing deployment complexity and time.
- Deployed APIs and Jobs, using Deployments, Services, Ingress, Egress, Routes, and Secrets, while ensuring Kyverno policy compliance.
- Developed Docker File and integrated Dynatrace and Splunk via sidecar containers, enabling better observability in Performance Testing.
- Strengthened release governance and security via CI/CD, DevSecOps, auth controls, and Apigee for APIs consumed by many internal apps.
- Led reverse KT sessions, mentoring team members on CronJob scheduling, SSL/DNS mapping, alerts and rules for batch jobs & APIs.

PERSONAL PROJECTS

Sentiment Ledger | *Spring Boot, Spring AI, Google Gemini, Kafka, Redis, Mongo DB Atlas, Razorpay, Docker*

- AI-powered invoice or subscription approval system that automates approve/reject/manual-review decisions using RAG-grounded LLM reasoning over financial policies, with full audit trail and idempotent payment execution using Razorpay.
- Implemented Kafka to decouple API latency from AI processing, used Redis for distributed locking MongoDB Atlas vector search for RAG so the AI grounds decisions in real policies, Resilience4j circuit breaker to stop hammering a failing payment service, and Prometheus for confidence-scored metrics to support compliance audits.

GenAI REST Service | *Spring Boot, Spring AI, Google Gemini, Redis, MySQL, Swagger/OpenAPI*

- Built production-grade Spring Boot REST API integrating Google Gemini AI for 6 use cases (text generation, summarization, Q&A, translation, code generation, analysis) with audit logging, rate limiting, and resilience patterns.
- Engineered with Java 21, Spring Boot 3.5, Spring AI, Redis, MySQL, Resilience4j, and JWT. Used Redis caching to cut repeat Gemini API calls 60%+, circuit breaker and retry logic to prevent cascading failures, and Swagger for Spec Driven Development.

EDUCATION

Bachelor of Engineering – Information Science and Engineering
Kumaraguru College of Technology, Coimbatore, Tamil Nadu, 2019 – 2023
